

Questions

1. Disregarding upgrades in desired functionality, how satisfied overall is the county with the overall performance and look and feel of the current sites?

On a scale 1-10 about a 4

2. Your existing application(s) are built on MapServer. In section C. Deliverables and Functionality, you state that the application must be platform neutral. Does this mean you will only accept an Open Source solution?

No

3. In section C. Deliverables and Functionality, you state that you want the ability to bring data into and out of Google Earth and Virtual Earth. Are you seeking the ability to publish to KML, etc. and have the ability to consume those same data types? Or are you looking for the application to have the ability to interface directly with Google Earth or VE?

Ability to turn on the imagery and have functionality like

<http://www.wifishfinder.com/map.php>

4. In section C. Deliverables and Functionality, you mention integration with CARMODY, NOVUS, and Fidler.
 - a. What format is the database backend for these applications, i.e. SQL, Oracle, Access?
 - b. How are these applications currently linked to GIS, i.e. joined through common attributes, etc?
 - c. Do any of these applications provide a web API or the ability to publish to a web service?

CARMODY/SQL

NOVUS/SQL

Fidler/SQL

Carmody is connected through a parcel number.

NOVUS is not currently linked – link on parcel or unique identifier.

Fidler is not currently linked – Link on document number

CARMODY – web base – technical support number 608-846-0234

NOVUS/Manatron – web base – technical support number 715-216-4554

Fidler – web base – technical support number 800-747-4600 and just ask for tech support

5. In section C. Deliverables and Functionality, you mention that you want to allow users to purchase or request a print of a map to be printed in the Land Records Dept. Does the County currently work or seek to work with any third party e-commerce solutions, such

as PayPal or American Express to handle these transactions?

See Q&A - Posted March 5, 2009

6. Were the original MapServer applications built in-house by the county, by an outside consultant, or a combination?

It was a consultant.

7. Does the county have a budget for this application? If so, are they willing to share that number with the interested consultants?

We do not have a set budget item for the application.
